About the Symposium on Food Allergy and the Microbiome

In 2013, WAO launched its theme-based Symposium. The WAO Symposium offers insights into the most recent advances and cutting-edge research on a chosen theme. Each Symposium has limited attendance, 350-400 attendees, making it the ideal setting for discussion and learning. The purpose of this two day meeting is to summarize what is scientifically known, learn about the cutting-edge research and to reach a consensus about the unmet needs of the chosen theme.

World Allergy Organization

The World Allergy Organization (WAO) is an international umbrella organization consisting of 97 regional and national allergy, asthma and clinical immunology societies from around the world. By collaborating with member societies, WAO provides direct educational and outreach programs to members in nearly 100 countries across the globe.

WAO was founded in 1951 and has successfully organized 23 major congresses. WAO also sponsors scientific symposia and training schools in emerging societies and jointly sponsors postgraduate programs on allergy, asthma and clinical immunology during professional congresses.

WAO provides advice and active support to member societies with the mission of building a global alliance of allergy, asthma and clinical immunology societies to advance excellence in clinical care through research, education and training.
